

Seven Quality Criteria for your project documentation

You are searching for a thorough and well-structured project documentation? You want to process your data safely and get a quick overview of all processes and workflows?

Why not use PKS NETPlan[®] then?

This web-based project communication system helps you manage projects of all sizes effectively.

Benefit from 7 advantages¹ PKS NETPlan[®] offers you. Use the system, and your data will always be

1. **up-to-date**
2. **complete**
3. **continuously and quickly available**
4. **consistent**
5. **systematic**
6. **traceable**
7. **safe**

With PKS NETPlan[®] you will always have full access to all relevant project data wherever you are. This allows you to manage complex issues in next to no time.

Example: Drawing Management

With PKS NETPlan[®] you enormously facilitate the processes in the design phase: The automatic referencing and categorisation of each drawing is done by an intelligent interpretation of a file name code developed in accordance with your project needs. Use the PKS NETPlan[®] drawing management module, and you will always have an excellent overview of your print jobs, including the costs.

Role concept

PKS NETPlan[®] is based on a role concept. This means that new project members can easily get into the project, having a complete overview of the processes related to their new field of work. In case of staff changes the successor takes over the project role of the predecessor and immediately has full access to all relevant information including correspondence.

Safety

All data you enter in PKS NETPlan[®] is safe: Information is transmitted at the same security level used in online banking. Complex access rights ensure that users can only see what they are allowed to see. Once the data are entered and saved they cannot be deleted any more.

New Projects

The PKS NETPlan[®] team is glad to have received the assignment for the following new projects (among others):

THE SQUAIRE at Frankfurt Airport

On 86 pillars, above the long-distance railway station, a futuristic and future-oriented "city in the city" is being built: 660 m long, 65 m wide and 45 m high, the property unites two hotels as well as opportunities for working, relaxation, and recreation. In this large-scale project the **PKS NETPlan[®] module Defect Tracking** is being used.

Office and Retail Building in Muenster

In the centre of Muenster, next to the railway station, an office and retail building built in 1957 is being refurbished. The rental space of this building, which consists of five sections and up to seven floors, is 21,600 m². The project members work with the **PKS NETPlan[®] modules Document Management and Drawing Management**.
